V. Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

I. statement

| • | Bearche | | • | 1 |
|---|--|--------|---------------------------------|-----|
| | Novelty (N) | Claims | (Please See supplemental sheet) | YES |
| | | Claims | (Please See supplemental sheet) | NO |
| | | | | |
| | Inventive Step (IS) | Claims | (Please See supplemental sheet) | YES |
| | Tarcautic busp (as) | Claims | (Please See supplemental sheet) | NO |
| | | | | |
| | | O1 - 1 | (Please Sec supplemental sheet) | YES |
| | Industrial Applicability (IA) | Claims | | |
| | 77 | Claims | (Please See supplemental sheet) | NO |
| | and the second s | | | |

2. citations and explanations

Claims 1, 17, 36 and 38 lack novelty under PCT Article 33(2) as being anticipated by Westaby et al. Claims 1, 17, and 36 Westaby et al. anticipates a wound irrigation device comprising a bandage configured to cover a wound (10) and to seal about the perimeter and providing a cavity over the wound, a fluid supply and a fluid drainage and fluid delivery and fluid drainage the configured to cover a wound fluid drainage and fluid delivery and fluid rainage and fluid delivery and fluid drainage and fluid delivery and fluid drainage and fluid delivery and fluid drainage and fluid delivery and fluid rainage and fluid delivery and fluid drainage and fluid delivery and fluid drainage and fluid delivery and fluid rainage and fluid delivery and fluid rainage and fluid delivery and fluid drainage and fluid delivery and fluid delivery and fluid drainage and fluid delivery and fluid deliv

Claim 58, although not stated it is inherent in the disclosure that a receptacle of some sort is connected to the fluid drainage line in order to collect the fluid drained from the wound.

Claims 8, 18-15, 21, 22, 37 and 39 lack an inventive step under PCT Article 53(5) as being obvious over Westby et al. Claims 8 and 57, Westaby et al. teach that hydrogen peroxide may be supplied to wound. Westaby et al. fail to teach a liquid medication pump is coupled to the fluid supply. The examiner contends that the addition of medication to a patient intravenously or directly to a wound site via a pump is well known and modifying Westaby with a liquid medication pump would have been routine within the level of one having ordinary skill in the art. Claims 12, 15, 13, 21 and 28 the dependent claims do not appear to contain any additional features, which in combination with the features of any claim to which they refer, add anything new or novel. More specifically, a pressure sensor, pressure sensor controller, and a display are well known features in the art, and the addition of such to a prior art device would only require routine skill in the art. Claims 30, Westaby et al. fail to teach be enable wire in the tubing. Absent a critical reaching and a showing of unexpected results derived from the usage of such, the examiner contends that the bendable wire is an obvious design choice.

Claim 4 lacks an inventive step under PCT Article 38(3) as being obvious over Westaby et al. in view of Harvey. Claim 4, Westaby et al.fail to teach a vacuum pump connected to the (Continued on Supplemental Sheet.)

International application No.
PCT/US99/17877

VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

The description is objected to as containing the following defect(s) under PCT Rule 68.8(s)(iii) in the form or contents thereof. page 8, line 29 "mebulizer output port 28" was previously designated with reference character 50, no page 10, the applicant designates "68" as a water trap, then refers to is as a pressure sensor on page 11; and on page 11, line 29, "selector valve 60" should read "efector valve 58".

International application No. PCT/US99/17877

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: Boxes I - VIII

Sheet 10

TIME LIMIT:

The time limit set for response to a Written Opinion may not be extended. 37 CFR 1.484(d). Any response received after the expiration of the time limit set in the Written Opinion will not be considered in preparing the International Preliminary Examination Report.

V 1 REASONED STATEMENTS:

The opinion as to Novelty was positive (YES) with respect to claims 2-16, 18-35, 37 and 39-44.

The opinion as to Novelty was negative (NO) with respect to claims 1, 17, 36 and 38.

The opinion as to Inventive Step was positive (YES) with respect to claims 2, 5-8,16, 18, 19, 20, 23, 24-35 and 40-44.

The opinion as to Inventive Step was negative (NO) with respect to claims 1, 3, 4, 9-15, 17, 21, 22, 36-38, 39.

The opinion as to Industrial Applicability was positive (YES) with respect to claims 1-44.

The opinion as to Industrial Applicability was negative (NO) with respect to claims NONE.

V. 2. REASONED STATEMENTS - CITATIONS AND EXPLANATIONS (Continued):

fluid drainage. However, Harvey teaches it is well known to connect a vacuum pump to a fluid drainage line of a wound dressing in order to evacuate fluid from the wound. It would have been obvious to one having ordinary skill in the art to modify Westaby with the addition of a vacuum pump connected to the fluid drainage in order to evacuate fluid from the wound, as suggested by Harvey.

Claims 9-11 are an inventive step under PCT Article 33(3) as being obvious over Westaby et al. in view of Viesturs. Claim 9, Westaby et al.fail to teach an oxygen supply connected to the fluid supply. However, Viesturs teaches it is conventional in the art to connect an oxygen supply to the fluid supply of a wound dressing because of the healing effects associated with providing oxygen to body sores and wounds. It would have been obvious to one having ordinary skill in the art to modify the dressing of Westaby with the addition of an oxygen supply connected to the fluid supply of a dressing because of the healing effects associated with providing oxygen to body sores and wounds. Claims 10 and 11, the addition of other itealing fluids such as air, as well as various valving configurations for selecting one or more fluids to be supplied to the wound is also considered an obvious design choice to one having ordinary skill in the art.

Claims 2, 5-8, 16, 18, 19, 20, 23, 24-35, and 40-44 meet the criteria set out in PCT Article 33(2)-(4), because the prior art does not teach or fairly suggest a wound treatment apparatus comprising the limitations claimed by the instant invention.
